

Uⁿⁱvers^{al} 1624.

A

**New Almanacke and
Prognostication, for
the yeare of our LORD
GOD. 1624.**

Being Bissextile or Leap-yeare.

Calculated and Composed for the
Meridian of the ancient Citie of
Dorham, where the Pole is mounted
about the Horizon almost
55. degrees.

Non nobis nati sumus.

Behold how that I have not labou-
red for my selfe onely, but for all them
that seeke knowledge.

By John Vaux, Curate of S. Helen. & Wickland.

LONDON:

Printed for the Company of

Stationers.

N. Ephemerides.

A briefe Computation of time compleate with-
in this present year, 1624.

Since the Creation of the world.	5594

Vaux. 1624.

A
Prognostication,

for the yeare of our

Lord God.

1624.

Being Bissextile or Leap-yeare.

Calculated and especially referred to the latitude and Meridian of the Citie of Durham:

seruing also for the whole
Realme of England.

With diuers prettie notes and
pleasant obseruations
fit for Schollers.

By *John Vaux* Curate of
S. Hellen Awkland.

LONDON.

Printed for the Company
of Stationers,

1624.

A Prognostication

To the friendly Readers.

Courteous Readers, you shall finde at the head of each moneth in mine Almanack, the ☿ Coniunction, ☐ Quartile, and ☊ Opposition, thus charactered, which the Astronomers call the Change, Quarter, and full of the Moone throughout the whole yeare, which was by the Composer of the Presse omitted & left out of my booke the last yeare, by reason they were written vpon the blanke side, which could not be printed according to the copie, because it came in too late, as it was alledged. And besides all this, there was many words passed in the printing without correction, in regard of mine owne occasions which hindred me, so that I could not see the doing of it my self. But I shal henceforth haue a friend in trust in mine absence, that shall see to it in my behalfe, and so quit me of the like censure which might otherwise befall me hereafter. And thus I take my leaue vntill the next yeare.

Eſt natura hominum nouitatis anida.

The nature of all men is such,
That nouelties delight them much:
For new things are in most request,
Yet tell no newes, it is not best.

John. Vanx

Vaux. 1624.

A true description of the foure Quarters
of this yeare 1624.

Of Winter.

Winter (according to Astronomicall computation) began the 13 of December last 1623. at what time the Sunne entred into the first minute of the Southern & Tropical signe Capricornus, making then the days shortest & the nights longest, at which time he began his southerne progresse towards his Equator. This quarter is of it owne nature cold & drie, at which time the earth is at rest, and ceaseth to bring forth, y^t it may gather together again, and recouer y^e lost strength against Summer: from whence Winter most commonly bindeth the earth, which it warmeth & couereth with snow as with a garment, and refresbeth it with store of raine. For snow and ice are comfortable to corne and fruite, and bringeth plentie of all things. And after the Sun hath accomplished his last degrees vnder Aquarius and Pisces, he openeth the earth with new & pleasant gales of winde, and prepareth the Spring time. And this is the generall and proper temperament or moderation of euery Quarter of the yeare, which is alwayes to be considered in Meteorologie, lest that we speake of flowers in Winter, and of ice in Summer.

The Diseases incident vnto this Quarter

¶ 2

are

A Prognostication.

are such as accompaie old age or dotage : viz. the gout, Sciatica, trembling of the ioynts, bleare eyes, the cough, the stone and stranguery, the cramp, Palsie, the shrinking of the sinewes, dropsies, and all cold diseases that comes by want of blood.

Of the Spring.

The Spring beginneth at the Sunnes entrance into the first minute of Aries, making then y^e days & nights of a like length thoroughout the whole world, which shall be this yeare the xi of March. This Quarter is by nature hot and moist. For then the Sun is both come nearer vnto his Verticall point, and also to starres of a hotter nature, causing thereby the drier winds to blow, of which sort is Subolanus and Fauonius, called the West windes, wherewith superfluous humours are waisted & consumed, the seed conveniently sowne, and the ground stirred and made fit to bring forth; which setteth forward trees, vines, flowers & leaues, and bedecketh the earth with grasse & herbs. But because the new and tender corne lately sprang vp requireth moistening showers, there ariseth in the morning with the Sun Pleiades, Hyades and Orion, and in the evening Arcturus tempestuous and moist starres, which stirre vp raine and moist winds. At the length the Sunne coming to Gemini, moueth

a conuenient and temperate heate to the former seed time.

The Diseases of this Quarter are such as are incident vnto infancie, which be these that follow, viz. the small pocks, measels, squinancie, morbus regius, shingles, ring-wormes or tetters, Saint Anthonies fire, the watertags, the frosgan, scabs, itchings, the fellon, pusses, inflammations, hot agues, and such like.

Of the Summer.

Summer beginneth at the Suns ingresse into the first minute of the southerne & Tropicall signe Cancer, which will be the 21. of June. This Quarter is by nature hot and dry, at whose beginning there ariseth Præiepe, Aselli, and other fixed starres of a moistning vertue, from whence by the Suns access is stirred vp raine, to bring forward corne and other fruit. But after that the things growing from the earth haue attained a iust increase, and by heate wareth toward maturation and ripenesse, the Sun appoaching the hot signe Leo, there ariseth Syrius and Procyon, which are starres of a hot constellation: therefore great heate is stirred vp, to the tempering whereof the Ethesian winds blow in the day time. Afterward the Sunne coming to Virgo, the said heate is mitigated by little and little, and at the rising of Arcturus it bringeth raine.

A Prognostication.

The Diseases of this Quarter be collicke, rising of the spleen, leprosie, pimples in y^e face, obstructions, feuers of blood, apostumes, iaudies, plurisies, stiches, inflammations, & such as proceed of adust choler & distemper of blood.

Of Autumne or Harvest.

Autumne beginneth the 14 of September, when the Sunne entreth into the first minute of the Equinotiall signe Libra, making then the nights equall with the dayes. This quarter is by nature cold and drie. For the heate ceaseth with the Summer passed. And although plentifull showers do then fall, so that the vintage is then abundant, and the Winter seed-time made more commodious: yet notwithstanding the remaining heate of the aire, which by the Sunnes access to hot starres in Sagittarius) is somewhat increased, and the moisture of the earth drawne vp, & the ground cherished and prepared for the Winter following, lest cold coming of a sodaine, might hurt the seed and Winter corne.

The Diseases of this quarter are crudities and rawnesse of the stomacke, surfettings, paines in the back, darknes in the sight, vertigo or turning of the brain, head-ach, retention of vrine, canker, fistulaes, emeroids, the stons, and strangurie, tooth-ach, with impediments in the eyes, and such like.

Of

Of the Leap-yeare.

In February beginneth alwayes the Leap-yeare, which is euer thus found:

Annus partiri per partes quatuor equas,

Cum poterit Domini, Bissextilis adesse docetur.

And this word Bissextile is deriued of Bis and sextos because the first day before the Calends of March (for which the letter F serueth) is twice repeated or reckoned, which indeed is the 24 day of Februarie, vpon which day the Feast of Saint Mathias commonly falleth, if it be not Leap-yeare.

Of the parts of the yeare.

The yeare is twofold, that is to say, common, containing 365 days, 6 houres and 8 minutes; and Bissextile containing 366 dayes. And it is to be noted, that these 6 houres aforesaid being foure times doubled, doe make one whole day euery fourth yeare to be put into the Calendar: which day is so placed in the Leap-yeare, that in the end of the moneth of Februarie, that is to say, the first of the Calends, is twice numbred. By which reason Februarie is increased one day euery Leap-yeare. And then the first of those two Domini-call letters of the yeare serueth vntill the 24 of Februarie, and the second serueth from thence vntill the end of the yeare. Furthermore, those 8 minutes aboue remembred, after 120

A Prognostication.

yeares makes one day. Which (being not observed) doth cause the Solstices and Equinoxials after every 120 yeares to go backe one day. And vnlesse this error be corrected, we shall in processe of time haue Christmas (which at the beginning fell in the Winter Solstice, from which it is now remoued almost 15 dayes) in the Springtime, and Midsummer in Autumne: and so at the length there will be an inuerse and preposterous order of the feasts and times. But how conueniently this may be done, I leaue to the learned to iudge vpon.

Of the Eclipses this yeare 1624.

There wil be fīue Eclipses of the two lights this yeare, that is to say, thre of the Sun, and two of the Moone. Two whereof, that is to say of the Moone, will be onely visible in our Horizon; the other thre of the Sunne, wil be seen of them beyond the Seas. The first Eclipse of the Moone will appeare to vs here in England vpon the 24 day of March, at 6 of the clocke and 30 minutes in the afternone.

The digits eclipsed will be 19. ho. min. se.

the beginning of her eclipse wil be at 4. 31. 44

Her totall obscuration at 5. 37. 59

Her middle or true opposition at 6. 30. 9

The first recovery of her light at 7. 22. 19

The end of her Eclipse at 8. 28. 34

The

Vaux. 1624.

The second Eclipse of the Sonne will be the
16 of September, at 9 of the clock and 7 mi-
nutes in the night.

The beginning whereof will be at 7. 20. 18

Her whole darknes at 8. 24. 55

Her middle or true opposition at 9. 19. 9

The recovery of her light at 10. 13. 23

The end of her trouble at 11. 18. 0

Astronomicall calculations of the planetary
motions for this yeare 1624.

Saturne is retrograde from the beginning
of this yeare vntill the 5 of April, and then di-
rect vntill the 4 of December following, and
retrograde all the rest of the yeare.

Jupiter is retrograde from the beginning of
this yeare vntill the 6 of April; and then direct
all the yeare after.

Mars and Venus are both of them direct
throughout all this yeare.

Mercurie is moued contrary to the succes-
sion of the Signes thrice times this yeare, that
is to say, from the 29 of February vntill the
9 of Nouember: and then direct all the yeare
after.

The Starre is but the instrument,

The Planet is the same:

The Signes also do represent

the euill mightie name.

A Prognostication.

In that all things created were,
Each other to supply:
The strong each feeble doth vpreare,
Who can the same deny?
As God is soule to euery man,
And life to creatures all:
So rules he them that ruleth vs;
which Starres by name we call.
Disdaine not then the noble skill
of Planets course and tide:
For they do rule thee by Gods will,
Yet God is still thy Guide.
The gift of thine immortall state,
is faith to God aboue:
Which teacheth thee by reason here,
how God imparts his loue.

A rule to know when wedding goes out
and comes in againe.

*Coniugiū Aduentus probibet, Hilaria; relinquit,
Septuagena vetat, sed Pascha octaua relaxat:
Rogamen veritat, concedit Trinapotaestas.*

Thus Englished.

The time of Aduent doth forbid,
That wedlocke be solemnized:
Yet on the day of Hilarie,
The Church is loosed and set free.

The

Vaux. 1624.

Then comes in Septuagesima,
And takes this freedome quite away:
Till eight dayes after Easter cease,
Which doth the Church againe release.
Rogation doth againe denie,
The Church her former libertie:
Which is released orderly,
On Sunday called Trinitie:
And in the Church doth still remaine,
Till Aduent Sunday come againe.

Now if you will know a reason, why the
Church at these times prohibiteth mariage,
it is this:

In Aduent, by reason of a spirituall ioy that
the Church (and so consequently every mem-
ber thereof for that time) doth or ought to con-
ceiue in the remembrance of her Spouse
Christ Iesus, and so abandon all affections of
the flesh.

In Septuagesima (which is alwayes the
third Sabbath before Shrouesunday) from
which, vntill the Octaues after Easter, the so-
lemnizing of mariage is by the Canon lawes
forbidden. The reason whereof is giuen, for
that all this time vntill Easter, is a time of
mourning for the fall of Adam, and for the mi-
sery of man thereof ensuing. And Easter with
the Octaues thereof is a time of Christs glozi-
fication, and so of ours also in him, for his, and
by

A Prognostication.

by him our conquest ouer death and sin. And that therefore all carnall affection ought (during that space) to be wholly mortified in vs.

In Rogation, so termed because of the speciall deuotion of prayer and fasting, then enioyned by the Church to all men, for a preparation to the ioyfull remembrance of Christs glorious ascending, and the descending of the holy Ghost in the forme of cloven tongues shortly after. And in that respect the solemnization of carnal matrimons is forbidden from the first day of the said weeke vntill Trinitie Sunday.

Significations of the Thunder in euery of the twelue Signes, according to the iudgement of Astrologers. Leopoldus.

If it thunder when the Signe is in Aries, that is to say more properly, when the Sonne is vnder Aries, there shall be abundance of herbes, and men shall suffer many troubles, and many shall die by the rope.

If it thunder when the Signe is in Taurus, it signifies great plenty of victuall in the many countreies, but small store in the vallies, wine, and the beasts of the field shall multiply.

If it thunder when the Signe is in Gemini, it signifies much raine and haile that yeare, great plentie of all maner of corne, and small increase of fowles, but great store of creeping things.

If it thunder when the Signe is in Cancer, it signifies famine and commotion, and that Locusts shall destroy the fruits of the earth.

If it thunder when the Signe is in Leo, it signifies sedition betwixt kingdomes, & dearth of victuall in the beginning, and discord of the people in the end, and that some great men shall die.

If it thunder when the Signe is in Virgo, it prognosticates deceits amongst men, and that fourefooted beasts shall die.

If it thunder when the Signe is in Libra, it threatens drought in the beginning, and raine in the end of the yeare, and dearth of victuall.

If it thunder when the Signe is in Scorpio, it betokeneth small store of grapes, and that fishes and sheep shall die, women shall be deliuered befoze their full tyme, and there shall be great windes, and the Moone shall be darkned in the East.

If it thunder when the Signe is in Sagittarius it foresheweth that there shall be conuenient raine and showers, the fruit of trees shall fall

A Prognostication.

fall butimely, and the seruants of Kings shall disagree and warre amongst themselves.

If it thunder when the Signe is in Capricornus, it doth demonstrates that many nations shall be dispersed.

If it thunder when the Signe is in Aquarius, it prognosticateth great store of raine, and terroz to men: it byings likewise windes, coughs and scabbiness, and there shall be great commotion in the world.

If it thunder when the Signe is in Pisces, it signifies ice, cold, and drought in the earth, fruit shall be scarce, there shall be abundance of wine and riches, notwithstanding men shall be sickly, and yet there shall not many die. And Astrologers say, that if the first night in January be faire, that is to say, without wind and raine, the entring yeare shall be good; but if it be windie, and the wind in the East, cattell shall die; but if the wind be in the West, Kings shall die: if the wind be in the South, it signifies great mortalitie, but if it be in the North, it signifies barrennesse.

Predictions of this yeare 1624.

In this yeare is signified a seasonable Winter, a good Spring time, an ill Summer,

a brie harness, but small store of corne; a good
 vintage, great store of oyle, diuers impedi-
 ments of the eyes, death of childzen, warres
 & seditions amongst soldiers, earth-quakes, &c.
 Now if any thing fall out well, let vs giue
 God the praise, as the only Authoꝝ thereof; if
 otherwise, let vs humble our selues vnder his
 fatherly correction, to whom be ascribed all
 power and glorie foꝛ euermore. Amen.

¶ A Geographickall Description of the
 right wayes from any notable Towne in England
 to the Citie of London, as also from
 one notable Towne to another.

From Yorke to London 150 miles.
